

MC Net/E-mail is the first in a suite of MCMS internet products that leverage your MCMS enterprise software and your internet presence to streamline business processes. This product will add electronic mail as an efficient and inexpensive way of providing MCMS generated documents to your business partners.

### Features and Benefits

- ◆ E-mail MCMS forms (e.g. purchase orders, quotations, mill test reports, etc.) on demand, from the MCMS software.
- ◆ MCMS forms can be sent as text (no graphics) in the body of the e-mail, or, an add-on conversion tool will allow the forms to be sent as PDF attachments which include logos and other graphics. The receiver of the PDF document will require Adobe Acrobat Reader to open the form.
- ◆ MCMS forms can be e-mailed, one at a time or when interfaced with the MC Forms and MC Fax products, can be formatted to e-mail, print and fax automatically, based on your business partner's requirements.

### Requirements

The MCMS server should be configured as a mail server, and connected to your Internet Service Provider via a dedicated line (i.e. DSL, ISDN, FT1).

### Upcoming MC Net products:

◆ *MC Net/File Transfer* provides a connection with the user's website using direct file transfer. This enables the website to periodically deliver information (e.g. order status) from the MCMS system directly to your website, and retrieve information from the website entered by the customer.

◆ *MC Net/Direct Data Exchange* provides a direct connection between the MCMS data and the user's website. This allows customers direct access through the website to retrieve and/or update information on the MCMS server.
