

The **MCMS Order Entry** system provides quick and accurate processing of sales orders and invoices. The system streamlines the entire process of generating an order, shipping the material, and invoicing your customer.

Interfaces

- ◆ Update other interfaced modules like Inventory, Accounts Receivable, General Ledger, Sales Analysis.
- ◆ Print MTR's automatically for flagged orders with Compusource's MC File, or provide your own "House Certification" form.
- ◆ Provide multiple branch and warehouse accounting, controls, and reports.

Customer Service

- ◆ Update the Open Orders file, print a picking/processing order and packing list, and then print an invoice when the order is shipped with just a single entry.
- ◆ Provide all the information necessary for the sales staff to get the order the first time a customer calls.
- ◆ Show quotes, orders and invoices, as well as stock levels, when an item is entered on an order.
- ◆ Display the customer's price matrix automatically.
- ◆ Access inventory availability, customer credit and sales, and purchasing histories within one inquiry program.
- ◆ Flag orders needing authorization for customers over their credit limit, past due, or under gross profit level. Send the information to users or groups by electronic-mail (E-mail).

Quote Entry

- ◆ Check stock and credit, enter a quote, turn it into an order and create the purchase order for any buyouts with one simple procedure.
- ◆ Create an accurate quotation by rolling up additional prices and costs for processing, freight, and material handling charges on item quotes.
- ◆ Fax quotes direct from any workstation with Compusource's MC Fax module.

Flexible Entries

- ◆ Calculate theoretical pieces, length, and weight automatically when entering items, dimensions, and quantities.
- ◆ Create special comments and shop instructions, as well as allocated material, heat numbers, and location on shop orders.
- ◆ Override default units of measure and automatically recalculate prices and costs based on the new unit of measure.
- ◆ Interfaces with the MC Fab module, which assists salespeople in quoting/selling virtually any shape that can be defined by an equation (e.g. circles, rings, ring segments, trepanned bar, etc.). Includes user-definable processing matrix to automatically calculate costs and sell prices for processing charges (e.g. sawing, burning, freight, etc.).
- ◆ Create cut lists for processing orders that calculate material required (including Kerf-loss) for the quantity and dimensions ordered.

Reports and Inquiries

- ◆ Open order reports by promise date, item, customer, etc.
- ◆ Daily, month-to-date and year-to-date bookings, reports, and flexible Invoice Journals.
